Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/danduthanishkareddy/Personalized-Networking-Assistant
Programming Language(s)	Python,HTML,CSS
Framework(s) Used	Streamlit, FastAPI, Hugging Face Transformers, PyTest, httpx TestClient

Key Features Implemented	• Event analysis using DistilBERT • AI-powered conversation topic generation using GPT-2 • Wikipedia-based fact checking • Conversation history management • Feedback collection system • REST APIs with FastAPI • Interactive Streamlit user interface • Automated testing with PyTest
Pending / Incomplete Features	• User authentication and login • Cloud deployment • Multilingual support • Voice-based interaction • Database integration for persistent storage
Setup / Run Instructions	1. Clone the GitHub repository. 2. Install dependencies using pip install -r requirements.txt. 3. Start FastAPI server using uvicorn app.main:app --reload. 4. Start Streamlit using streamlit run app.py. 5. Open http://localhost:8501 in the browser.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The Personalized Networking Assistant follows a modular architecture with separate services for Event Analysis, Topic Generation, Fact Checking, Feedback Management, and API Routing. The project uses FastAPI for backend APIs, Streamlit for the frontend interface, Hugging Face models for AI-based recommendations, and PyTest for automated testing. The application has been successfully tested locally and is designed to support future enhancements such as cloud deployment, multilingual capabilities, authentication, and persistent database storage.
