

Performance Testing

Date	01 July 2026
Team ID	N/A
Project Name	Personalized Networking Assistant
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	PyTest, HTTPX TestClient
Type of Testing	Performance Testing, API Testing, Functional Testing
Target Module / API	Conversation Generation API, Self-Introduction API, Networking Tips API, Fact Checker API, FastAPI Endpoints
Test Environment	Localhost (FastAPI + Streamlit)
Test Date	01 July 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Conversation Generation API	10	60	Generates personalized conversation starters successfully.
2	Self-Introduction API	10	60	Generates professional self-introductions within the expected response time.
3	Fact Checker API	10	60	Returns verified information using the Wikipedia API.
4	Complete Streamlit Application	10	120	Application remains responsive without failures.

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Average Response Time	< 3 seconds	2.1 sec	Pass	Fast response from FastAPI and Groq API
2	Maximum Response Time	< 5 seconds	3.8 sec	Pass	Within acceptable limit
3	API Success Rate	> 99%	100%	Pass	All API requests completed successfully
4	Error Rate	< 1%	0%	Pass	No request failures observed
5	CPU Utilization	< 80%	46%	Pass	Efficient CPU utilization
6	Memory Utilization	< 80%	54%	Pass	Memory usage remained within acceptable limits

Step 4: Observations & Analysis

- The FastAPI backend processed API requests efficiently under normal load conditions.
- The Groq API generated AI responses within the expected response time.
- Wikipedia API integration successfully verified factual information without significant delays.
- Streamlit remained responsive during continuous testing.
- SQLite (networking.db) stored and retrieved conversation history efficiently.
- No application crashes or API failures were observed during testing.
- The modular architecture allows future scalability and additional feature integration.

Step 5: Screenshots / Evidence

Attach screenshots of your testing results below

Networking Tips

- Carry business cards always.
- Be ready to ask questions.
- Smile and make eye contact.

Self Introduction

Hi, I'm Teja, a BTech professional with a passion for programming in Python and Java. Excited to connect and learn at this seminar.

Conversation Starters

- I'm really excited to learn more about the latest advancements in AI and explore potential applications in various industries, what brings you to this event today?
- What are your thoughts on the integration of AI and machine learning in the field of engineering, and how do you see it impacting our future as BTech graduates?
- I've been following some of the recent breakthroughs in natural language processing and computer vision, have you had a chance to work on any AI-related projects or research during your undergraduate studies?

Conversation History

Teja

Event: Google Cloud GenAI Workshop

Topics:

- Natural Language
- Neural Networks
- Deep Learning
