Project Name	Personalized Networking Assistant
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / N/A)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / dependency file	Yes
4	SQLite database (networking.db)	Yes
5	Environment configuration file (.env.example)	Yes
6	Deployed application URL (if hosted)	No
7	Executable binary / APK (if applicable)	N/A
8	Dockerfile / Containerization configuration	No
9	Test files and test results	Yes
10	Demo video / Walkthrough (if required)	Yes

Step 2: File / Folder Structure

Personalized-Networking-Assistant

```
|
|
|  └─ app
|    └─ main.py
|    └─ config.py
|    └─ models
|      └─ schemas.py
|    └─ routers
|      └─ conversation.py
|  └─ services
|    └─ conversation_starters.py
|    └─ self_introduction.py
|    └─ networking_tips.py
|    └─ fact_checker.py
|    └─ history_logger.py
|  └─ feedback_logger.py
|
|
|  └─ frontend
|    └─ app.py
|
|
|  └─ tests
|    └─ conftest.py
|    └─ test_routes.py
|    └─ test_conversation.py
|    └─ test_self_introduction.py
|    └─ test_networking_tips.py
|  └─ test_fact_checker.py
|
|
|  └─ networking.db
|  └─ requirements.txt
|  └─ .env.example
|  └─ README.md
└─ .gitignore
```

Provide an overview of your project's file and folder structure below:

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Localhost Deployment
Login Credentials (Demo)	Not Required
Platform / Hosting Provider	Local Machine
Repository Link	https://github.com/danduthanishkareddy/Personalized-Networking-Assistant
Demo Video Link	Not Available

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1. Clone the GitHub repository.

git clone <https://github.com/danduthanishkareddy/Personalized-Networking-Assistant.git>

2. Open the project folder in Visual Studio Code.

3. Create a Python virtual environment by running the following command:

```
python -m venv .venv
```

4. Activate the virtual environment.

Windows:

```
.venv\Scripts\activate
```

5. Install the required project dependencies.

```
pip install -r requirements.txt
```

6. Create a .env file by copying the .env.example file.

7. Open the .env file and add your Groq API key.

8.Start the FastAPI backend server.

uvicorn app.main:app --reload

9. Open a new terminal and start the Streamlit frontend.

streamlit run frontend/app.py

10.Open the application in a web browser.

Application URL:

<http://localhost:8501>

11.Access the FastAPI API documentation.

Swagger UI:

<http://127.0.0.1:8000/docs>

12.Enter the required user details and event information to generate AI-powered conversation starters, self-introductions, networking tips, and fact-verified responses.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Requires an internet connection for Groq API and Wikipedia API.	Internet connection is required while using the application.
2	User authentication is not implemented.	Planned as a future enhancement.
3	Cloud deployment is not available.	Application runs successfully on localhost.
