

Solution Requirements

Date	30 June 2026
Team ID	N/A
Project Name	Personalized Networking Assistant
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users can securely access the application through the Streamlit interface. (No login module in current version.)	Medium
2	Authorization levels	All users have equal access to generate conversation starters, perform fact-checking, and view history.	Medium

3	External interfaces	Integrates with Wikipedia API for fact-checking and uses DistilBERT and GPT-2 AI models.	High
4	Transactions processing	Accepts user event details and interests, processes AI requests through FastAPI, and returns conversation starters and verified information.	High
5	Reporting	Displays generated conversation starters, extracted topics, fact-check results, conversation history, and feedback history.	High
6	Business rules, etc.	Event description and user interests are mandatory before generating suggestions. All feedback and history are stored locally in JSON files.	High
7	Compliance to laws or regulations	Uses only publicly available information and avoids storing sensitive personal data.	Medium

8	<i>Other</i>	Users can submit feedback and review previous conversations to improve networking preparation.	Medium
---	--------------	--	--------

Step 2: Non-Functional Requirements (NFR)

1	Performance & Speed	Generate AI responses quickly for a smooth user experience.	Response within 3–5 seconds
2	Scalability	Modular architecture allows future AI models and APIs to be added easily.	Supports additional modules with minimal code changes
3	Security & Data Privacy	Local storage of conversation history and feedback. Input validation through FastAPI and Pydantic.	Secure API validation with no sensitive data exposure
4	Reliability & Availability	Reliability & Availability Application should remain stable during continuous usage.	99% successful request processing
5	Usability & Accessibility	Simple Streamlit interface that is easy for first-time users.	User-friendly interface with minimal navigation
S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria

6	<i>Other</i>	Maintainable and modular code using FastAPI services and reusable components.	Easy maintenance and future enhancements
