

Project Initialization and Planning Phase

Date	30 June 2026
Team ID	N/A
Project Title	Personalized Networking Assistant
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The Personalized Networking Assistant is an AI-powered application designed to help users communicate confidently during professional networking events. It generates personalized conversation starters based on user interests and event descriptions using Natural Language Processing (NLP). The application also provides fact-checking through the Wikipedia API, stores conversation history, and collects user feedback for continuous improvement.

Project Overview	
Objective	Develop an AI-powered networking assistant that generates personalized conversation starters, verifies facts, and helps users build confidence during professional networking events.
Scope	The project focuses on assisting students, professionals, and job seekers by using NLP models, FastAPI services, and a Streamlit interface to improve networking experiences through intelligent conversation support.
Problem Statement	
Description	Many students and professionals struggle to initiate meaningful conversations during networking events because they lack confidence, relevant discussion topics, and quick access to reliable information.
Impact	This leads to missed networking opportunities, reduced confidence, ineffective professional communication, and fewer career connections.

Proposed Solution	
Approach	Develop an AI-based application that analyzes user interests and event descriptions using DistilBERT and GPT-2 to generate personalized conversation starters. Integrate Wikipedia API for fact-checking and provide conversation history and feedback tracking.
Key Features	- AI-generated personalized conversation starters. - Event topic classification using DistilBERT. - Fact-checking using Wikipedia API. - Conversation history tracking. - User feedback collection. - Interactive Streamlit interface. - High-performance FastAPI backend.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU for AI model execution	Intel i5/Ryzen 5 or above
Memory	RAM 8 GB	8 GB
Storage	Project files, models and logs	20 GB SSD
Software		
Frameworks	Backend & Frontend	FastAPI, Streamlit
Libraries	NLP & AI	Transformers, Torch, Requests, Pytest, httpx
Development Environment	IDE	Visual Studio Code

Data		
Data	Resource Type Description Specification Data	User inputs, conversation history, feedback data JSON files (history.json, feedback.json), Wikipedia API responses
