

## Data Flow Diagram

|                      |                                   |
|----------------------|-----------------------------------|
| <b>Date</b>          | 30 June 2026                      |
| <b>Team ID</b>       | N/A                               |
| <b>Project Name</b>  | Personalized Networking Assistant |
| <b>Maximum Marks</b> | 2 Marks                           |

### Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

### DFD Symbol Legend

| Symbol                                                                              | Name                   | Description                                                                                                                         |
|-------------------------------------------------------------------------------------|------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
|  | <b>External Entity</b> | A person, organization, or system outside the project that sends or receives data (e.g., User, Wikipedia).                          |
|  | <b>Process</b>         | An activity or operation that transforms incoming data into outgoing data (e.g., Analyze Interests, Generate Starters, Fact Check). |
|  | <b>Data Store</b>      | A place where data is held for later use (e.g., Conversation History, Feedback).                                                    |
|  | <b>Data Flow</b>       | The movement of data between entities, processes, and data stores.                                                                  |

### Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.

## Personalized Networking Assistant – Data Flow Diagram
