Project Name	Personalized Networking Assistant
Maximum Marks	5 Marks

Solution Architecture Diagram:

Provide a high-level visual representation of your solution's architecture. Use the structural layout below as a template to map out your Presentation Layer, Application Layer, and Data Layer. Fill in the specific technologies and components for your project directly into the boxes to create your architectural diagram.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Provides an interactive user interface where users enter profile details, event information, generate AI-powered conversation starters, self-introductions, networking tips, verify facts, and view conversation history and feedback.	Streamlit
API Gateway	Receives requests from the frontend, validates user inputs, routes requests to backend services, and returns responses to the Streamlit application.	FastAPI
Backend Services	Modular backend services responsible for AI-powered conversation generation, self-introduction generation, networking tips, fact verification, conversation history management, and feedback management.	FastAPI Service Modules, Groq API, Wikipedia API
Database Layer	Stores conversation history and user feedback for retrieval and future reference.	SQLite (networking.db)
