

Scalability & Future Plan

Date	01 July 2026
Team ID	N/A
Project Name	Personalized Networking Assistant
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Supports only English language conversations	Limits usability for multilingual users	High
2	Runs on local deployment only	Not accessible over the internet	High
3	Limited conversation history and personalization	Less personalized recommendations over time	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Supports limited concurrent users	Deploy the application on a cloud platform with load balancing and auto-scaling.
2	Data Storage	SQLite (networking.db)	Migrate to PostgreSQL or MySQL for scalable and centralized data storage.
3	Performance	Suitable for small-scale usage	Improve performance using asynchronous APIs, response caching, and optimized database queries.
4	Security	Basic local security	Implement JWT authentication, HTTPS, and encrypted data storage and secure API access.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Deploy the application on cloud platforms (AWS, Azure, or Render)	1 Month	Remote accessibility and improved availability
Phase 2	Add multilingual networking support	2 Months	Enable users from different languages and regions
Phase 3	Implement user authentication and profile management	3 Months	Secure user access and personalized networking experience
Phase 4	Introduce AI-powered recommendation improvements and analytics dashboard	4 Months	More personalized networking suggestions and better user insights
